

Anatomy and Physiology Laboratory

Anatomy and Physiology laboratory is offered to the students of biomedical design. This lab. is always offered along with the theory course on Human Anatomy and Physiology, taught by a senior professor of medicine. As the students of biomedical design need to have a good understanding of human anatomy and physiology, this laboratory empower the students to explore and understand the science of human anatomy and physiology.

The theory and lab. course helps the students to have a good understanding of the Body Plan & organization, Homeostasis, skeletal System & Articulations, Muscular System, Nervous System, Special Senses, Endocrine System, Cardiovascular System, Respiratory System, Digestive System, Metabolism, Urinary System, Fluid/Electrolytes & Acid/Base Balance, Reproductive System

Facilities:

Physical models of anatomical systems

Simple instruments used in the anatomical and physiological examinations
